#### **PLEASE NOTE**

Operating current derating according to cell voltage and battery temperature.

- 1. Test conditions: 100% depth of discharge (DoD), 0.2C rate charge & discharge at 25°C;
- 2. Charge/discharge derating occurs when the operating temperature from -10°C to 5 °C & 45°C to  $55^{\circ}$ C.
- 3. Condition apply. Refer to SUN-BATT-5.12R Warranty Letter

# 1.1. Appearance

### 1.1.1. Rack Mounted SUN-BATT-5.12R

### 2. PRODUCT OVERVIEW

#### 2.1. Brief Introduction

SUN-BATT-5.12R is a lithium battery with an operating voltage range between 45.6~56.16V. It is designed for residential energy storage applications and works together with a 48v battery hybrid inverter. SUN-BATT-5.12R is not suitable for supporting life-sustaining medical devices.

SUN-BATT-5.12R has built-in BMS (Battery Management System), which can manage and monitor cells information including voltage, current and temperature. Besides that, BMS can balance cells charging to extend cycle life. BMS has protection functions including over-dis- charge, over-charge, over-current and high/low temperature; the system can automatically manage charge state, discharge state and balance state.

Multiple SUN-BATT-5.12R can be connected in parallel to expand capacity and power, 8 SUN-BATT-5.12R can be connected in parallel at most.

### 2.2. Interface Introduction

#### 2.2.1. Switch ON/OFF

#### Switch ON

For single SUN-BATT-5.12R, switch ON rocker switch, then long press (more than 3 seconds) ON/OFF button on front panel, LED will flash, then battery will operate normally. L1 to L6 shows battery SoC, L7/L8 shows battery status.

For multiple SUN-BATT-5.12R in parallel, switch ON rocker switch on all batteries, long press (more than 3 seconds) ON/OFF button of MASTER battery, LED will flash, battery system will automatically encode and assign ID to each slave battery, then battery system will operate normally.

#### **Switch OFF**

Press start button of Master PACK more than 3s and then release the button, the master pack will shut down after all slave packs shut down(Sleep mode).

For single SUN-BATT-5.12R, switch OFF rocker switch.

For multiple SUN-BATT-5.12R in parallel, switch OFF rocker switch on MASTER battery first. Then switch OFF rocker switch on all slave batteries

### 2.2.2. LED Indicator Definition

#### Note:

- flash 1 0.25s light / 3.75s off
- flash 2 0.5s light / 0.5s off
- flash 3 0.5s light / 1.5s off

### 2.2.3. CAN / RS485 Port

CAN / RS485 Communication Terminal (RJ45 port), connect to inverter, follow CAN / RS485 protocol.

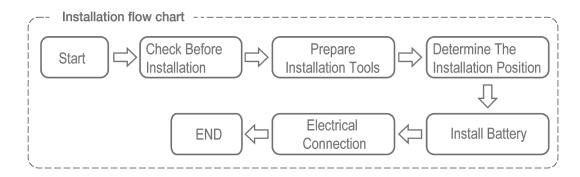

| PIN          | Definition                   |
|--------------|------------------------------|
| Pin 1, Pin 8 | RS485-B ( to PCS, reserved ) |
| Pin 2, Pin 7 | RS485-A ( to PCS, reserved ) |
| Pin 3        | NC                           |
| Pin 4        | CANH ( to PCS )              |
| Pin 5        | CANL ( to PCS )              |
| Pin 6        | GND                          |

### 2.2.4. RS232 Port

RS232 Communication Terminal (RJ45 port) follow RS232 protocol, for manufacturer or professional engineer to debug or service.

#### 3. INSTALLATION GUIDE

## 3.1. Checking Before Installation

# 3.1.1. Checking Outer Packing Materials

Packing materials and components may be damaged during transportation. Therefore, check the outer packing materials before installing the battery. Checking the surface of packing materials for damage, such as holes and cracks. If any damage is found, do not unpack the battery and contact the dealer as soon as possible. You are advised to remove the packing materials within 24 hours before installing the battery.

## 3.2. Checking Deliverables

After unpacking the battery, check whether deliverables are intact and complete. If any damage is found or any component is missed, contact the dealer.

The below table shows the components and mechanical parts that should be delivered.

# **3.2.1. Rack Mounted Accessory Deliverables**

### **3.3. Tools**

|                |               | Tools             |                         |
|----------------|---------------|-------------------|-------------------------|
|                | Knife         | Measuring tape    | Socket wrench (10/16mm) |
| Installation   |               |                   |                         |
| II IStaliation | Rubber mallet | Cross Screwdriver | Hammer drill (8mm)      |
|                |               |                   |                         |
|                | ESD gloves    | Safety goggles    | Anti-dust respirator    |
| Protection     |               |                   |                         |
| TTOCCCCOTT     | Safety shoes  |                   |                         |
|                | ELLE S        |                   |                         |

# 3.4. Installation Requirements

## 3.4.1. Installation Environment Requirements

- Install the battery in the indoor environment.
- Place battery in secure location away from children and animals.
- Do not place the battery near any heat sources and avoid sparks.
- Do not expose the battery to moisture or liquids.
- Do not expose the battery to direct sunlight.

### 3.4.2. Installation Carrier Requirements

- Only mount battery on fire resistant building. Do not install batteries on flammable buildings.
- Battery is quite heavy, make sure the wall/ground can meet the load bearing requirements.

# 3.5. Installation Instructions

## 3.5.1. Dimensions

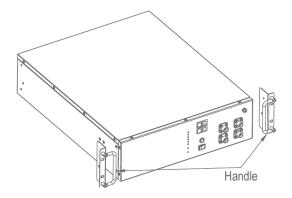

# 3.5.2. Installation Steps (Rack Mounted)

#### STEP 1

Remove the handle from the battery.

STEP 2

Install Support frames at the four corners of the battery.

#### STEP 3

The battery with the support frame is stacked up and down.

# 3.5.3. Installation Steps (Wall Mounted)

Minimum mounting distance requirement (Wall Mounted):

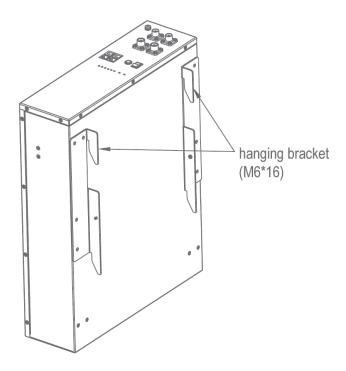

#### STEP 1

Drill the hole with an 10mm drill bit as follows and fix the wall bracket to the wall.

#### STEP 2

Install the wall hanging bracket.

STEP 3

Hang the machine on the wall hanging back plate and tighten it.

### 4. BATTERY POWER AND COMMUNICATION CONNECTIONS

# 4.1. Wiring Steps

#### STEP 1

Connect the battery to ground.

#### STEP 2

Connect the battery power line.

#### STEP 3

Connect the communication lines.

### 4.2. Parallel Cascade Connection

### 4.2.1. Power Cable Wiring Instructions

Each SUN-BATT-5.12R has two pairs of power cable terminals, two P+, and two P-. The connec- tion terminals of each pair have the same function.

#### **Single Module**

In a single module application, any of the terminals of each pair can be used.

#### **Parallel System**

Multiple batteries can be connected in parallel to expand the capacity and power. When using multiple batteries in parallel, one will operate as a master and the others as slaves. One of the **Master** pack P+ terminals should connect to the PCS, and the other should connect to another battery for capacity expansion.

One of the P- terminals of the last **Slave** pack should connect to PCS, and the other should connect to another battery for capacity expansion.

For the other **Slave** packs, each P terminal should be connected to another battery's terminal.

#### **PLEASE NOTE**

The connection to the protection devices should use the P+ terminal from the Master pack and the P- terminal from the last Slave pack.

### 4.2.2. Communication Cable Connections

The Master battery can automatically identify the Slaves batteries connected in parallel using its internal software control. The communication terminals Port In and Port Out (RJ45 port) are integrated with the signal for automatic coding function.

The following describes the connections of a system with four batteries packs, one Master, and three Slaves.

- The CAN communication port of the Master pack should connect to PCS;
- Port In from the Master pack should not be connected;
- The Port Out from the master PACK should connect the Port In of the first slave PACK using a parallel communication wire:
- The Port Out of the first Slave pack should connect to the Port In of the second Slave PACK;
- Following the same pattern, the Port Out of the second Slave pack should connect to the Port In of the third Slave PACK:
- The Port Out of the third and last slave PACK should not be connected.

# 4.2.3. Wiring Diagram for Parallel Cascade Connection

When multiple batteries are connected in parallel, follow the following wiring mode.

### 5. MAINTENANCE

# 5.1. Recharge Requirements During Normal Storage

Battery should be stored in an environment with temperature range between -10°C  $\sim$  +45°C, and maintained regularly according to following table with 0.5C (25A) current till 40% SoC after long storage time.

| Recharge Conditions When In Storage |   |              |             |  |  |
|-------------------------------------|---|--------------|-------------|--|--|
| Storage Environment<br>Temperature  | Relative Humidity of<br>Storage Environment | Storage Time | soc         |  |  |
| Below -10°C                         | /   | prohibit     | /           |  |  |
| -10~25°C                            | 5%~70%                                      | ≤12 months   | 30%≤SOC≤60% |  |  |
| 25~35°C                             | 5%~70%                                      | ≤6 months    | 30%≤SOC≤60% |  |  |
| 35~45°C                             | 5%~70%                                      | ≤3 months    | 30%≤SOC≤60% |  |  |
| Above 45°C                          | /   | prohibit     | /           |  |  |

# 5.2. Recharge Requirements When Over Discharged

Over discharged (90% DoD) battery should be recharged according to following table, otherwise over discharged battery will be damaged.

| Recharge conditions when battery is over discharged |           |                                    |  |  |  |
|---|-----------|------------------------------------|--|--|--|
| Storage Environment Temper-<br>ature                | Note      |                                    |  |  |  |
| -10~25°C  | ≤15 days  | Patton, Pack disconnected from DCC |  |  |  |
| 25~35°C   | ≤7 days   | Battery Pack disconnected from PCS |  |  |  |
| 35~45°C   | <12 hours | Battery Pack connected to PCS      |  |  |  |
